| <br><b>100% PURE STEEL</b> | Highly durable against the dust   | <br><b>100% PURE STEEL</b> | Highly durable against the dust                             | <br><b>100% PURE STEEL</b>         | Increases durability & allows for better repair     |

\*TFC (Watt) varies by model and may vary from the values mentioned in this guide.

# PERFORMANCE

Third-party certification of LEED Platinum by all owners (2024)

Proven energy performance & occupancy health score

Proven high EPC rating (100% - 2024) & other ratings (100% - 2022/23)

High efficiency water use in cooling tower

Maximized use of air conditioning (2024)

Proven energy savings by reducing high performance water

Green electricity & renewable resources

Proven performance on all 10 categories

Total 100% LEED Platinum higher scores than other (2024)

Cost performance in all categories

High scores for both operational excellence & high quality of construction and care

Superior digital tool of all

Low carbon

100% savings for services at these facilities, this making it also cost-effective

# DESIGN

Artificially creating

For better air quality

Eliminate the use of plastic in high-rise, help to provide customer & resident health

Proven energy performance with improved water use & lower emissions

For 100% energy efficiency and 100% water efficiency

To a high-quality and improved performance

### SUPREME PLUS

Blade: 400mm  
Speed: 1400RPM  
Air Delivery: 1100CMM  
Power: 120W

3 YEAR  
WARRANTY

1 YEAR  
WARRANTY

Also available in 500W Motor speed.

## Sweep stakes: How the 'sweep' of your fan makes a difference

The 'sweep' of a fan is determined by taking the distance from the edge of one blade to the centre of the motor and then doubling that number. For example, if the distance between the edge of one blade and the centre of the motor is 24", you would have a 48" (equal to 1230 mm (39" x 2 = 78") sweep ceiling fan. The length of the sweep determines the amount of air that a given fan is capable of shoving.

You should always choose a sweep extending upon the size of your room. A larger room requires a fan with a longer sweep to keep it cool, whereas a smaller room can be effectively cooled with a fan of a shorter sweep.

### How to calculate the ideal sweep for your room:

- Find out the prospective fan's sweep by measuring and multiply it by 2
- Now match the figure against the table below to find the perfect fan for your room

| Size of the room       | Fan sweep in inches                    |
|------------------------|--|
| 12'0" to 14'0"         | 48" to 54"                             |
| 14'0" to 16'0"         | 54"                                    |
| 16'0" to 18'0" to 4'0" | 60"                                    |
| More than 18' x 21'    | 72" to 84" (see fan's recommendations) |

## Tips to get the most out of your ceiling fan:

- The room should ideally be well-ventilated (there should be an open window or door)
- The gap between the ceiling and the blades should be at least 1 foot.
- The fan blades should be at a height of 8 feet from the floor.
